NATO Advanced Study Institute

The Role of VLBI in Astrophysics, Astrometry and Geodesy

Summer School 2001

Albergo delle Terme , Castel San Pietro Terme (Bologna)
September 17 – 29, 2001

Relevant dates:

20-MAY-2001	Deadline for grant application
01-JUN-2001	SOC will inform you about the travel grant
10-JUN-2001	Deadline for registration & hotel booking
17/29-SEP-2001	VLBI SCHOOL

The Istituto di Radioastronomia of the CNR, on behalf of the European VLBI Consortium, will host the NATO ASI VLBI Summer School next September 17-29, 2001. The purpose of the ASI Summer School is to update and enlarge our knowledge on the scientific potential of Very Long Baseline Interferometry (VLBI) and its development, 13 years after the similar school held in Castel San Pietro Terme. In particular, it is our purpose to review VLBI techniques in the light of the most advanced astronomical observations, and to emphasize the scientific issues where this technique is recognised to play a crucial role in the fields of galactic and extragalactic astronomy, astrometry and geodesy. Another important aim of the school is to stimulate discussion and collaboration among people working in different areas of research.

Detailed information on the summer school is available at http://www.ira.bo.cnr.it/~cspt2001
